

Touro University Nevada was established to help address critical needs in health sciences and education and as a resource for community service in the state of Nevada. A non-profit, Jewish-sponsored, private institution affiliated with an international system of higher education, the university opened its doors in 2004. Touro University Nevada is home to more than 1,700 students in a wide range of degree programs in osteopathic medicine, nursing, physical therapy, occupational therapy, physician assistant studies, camp administration and education. Many of these programs are the first of their kind in the state of Nevada.

## Innovative Facilities

Touro University Nevada's campus is innovative in both space design and technology. Anticipating rapid growth and focusing resources on academic needs, Touro University Nevada purchased two existing, flexible shell buildings within Henderson's Black Mountain Business Park, providing expandable space for years to come. With state-of-the-art classrooms and laboratories, offices, a university library, common spaces and clinics, Touro currently occupies 142,000 square feet of custom built-out space in building one. Touro will more than double its space with the next expansion of building one, adding 165,000 square feet. Building two, currently occupied by rental tenants, holds another 200,000 square feet of potential university space for future use.

## Academic Programs

- Doctor of Nursing Practice
- Doctor of Physical Therapy
- Master of Science in Nursing
- Master of Science in Occupational Therapy
- Master of Science in Camp Administration and Leadership
- Master of Education
- Bachelor of Science in Nursing (generic and returning RN options)
- Education endorsement programs

## Community Resources

### *Center for Autism and Developmental Disabilities*

Developed to address a growing community need, Touro University Nevada's Center for Autism and Developmental Disabilities is unique as a multi-disciplinary, one-stop source for diagnostic services, therapy and supportive resources for families dealing with autism and other developmental disorders. This team approach affords individualized treatment programs based on each child's individual needs. The center also serves as a learning laboratory for university students across the disciplines.

### *Health Center*

The university also has a full-service physician's office, staffed by practicing faculty members and open to the community. Current services include rheumatology, primary care, geriatrics, osteopathic manipulative medicine (OMM) and gynecology. The state-of-the art health center also provides on-site learning opportunities for students. An expanded health center is planned for the next phase of the university's build-out.

## Graduate Medical Education

Touro University Nevada is the academic sponsor of Valley Hospital's graduate medical residency program, providing not only training opportunities for Touro students, but also an excellent venue for medical residents to come into the state and work in a range of specialties.

The program currently includes traditional internships for first year trainees who will ultimately progress into other specialties; the largest single internal medicine residency program in the osteopathic medical profession; family practice residencies; and the only ophthalmology and neurology residency programs in the state.

The university is actively working to develop similar partnerships with other hospitals in the future, to further expand in-state residency opportunities and ultimately to increase both the number and specialized expertise of Nevada physicians. Medical industry statistics show that roughly 70% of new physicians practice within 50 miles of their training location.

## Partnerships

Touro University Nevada is committed to developing innovative community partnerships to maximize resources and provide exceptional educational opportunities for students and faculty. Strong and growing networks of preceptors host Touro students in the health sciences for hands-on clinical rotations. The university partners with the Clark County School District's Center for Teaching Excellence (CTE), offering advanced education for southern Nevada teachers. Agreements with Nevada State College and the University of Nevada, Las Vegas, afford accelerated degree paths for students in both occupational sciences and osteopathic medicine. And that's just the beginning.
